# Avaya Aura™ Collaboration Server

## Communications Platform Delivers Powerful Avaya Collaboration Tools with Minimal Investment

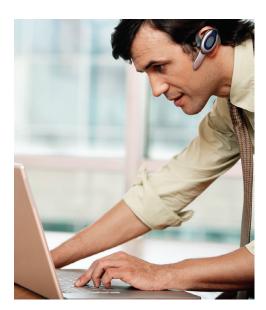

### Overview

Today's businesses must be one step ahead of the competition. Productivity-enhancing communications solutions are a key element of an overall strategy. However, trialing new applications can be time consuming, complex and costly… especially when infrastructure needs to be updated for end-user trials.

The Avaya Aura™ Collaboration Server provides the core elements of Avaya Aura™ in a single server solution. It enables businesses with existing Avaya infrastructure to evaluate Avaya's newest SIP endpoints and applications without upgrading their entire communications network. With a minimal investment, Avaya customers can conduct targeted end-user trials.

### Benefits

- **Conduct Trials of New Collaboration Capabilities on Your Own Schedule** – Test Avaya's newest applications including SIP based video solutions and collaboration endpoints. Regardless of when new SIP applications are released, you'll be ready to test them and determine which are best for your business.

- **No Need to Upgrade Your Existing Network** – You don't have to deploy the most current software releases throughout your Avaya infrastructure to test new capabilities. The Avaya Aura™ Collaboration Server is a separate Avaya Aura™ environment (running the newest software releases) that connects to your network.

- **Keep Trial Users in the Mainstream** – Successful trials depend on being able to test applications across many users and teams. With the Avaya Aura™ Collaboration Server, demo endpoints are part of your overall network and dial plan. Trial users can communicate throughout the organization, with minimal disruption to their work flow.

- **Easy Installation and Management** – Powered by Avaya Aura™ System Platform virtualization technology, this single server solution is simple to deploy. Unified tools also streamline daily management.

- **Limit Capital Expenditures** – The adjunct Avaya Aura™ Collaboration Server offers substantial cost savings on both software and hardware by not requiring upgrades to your existing Avaya platform.

- **Save Rack Space** – This powerful communications platform only requires a single server. The less rack space you use, the more space you have for other mission critical hardware.

### Capabilities

- **Designed for Pilots of New SIP Products and Solutions** – Businesses can easily trial Avaya Video Conferencing Solution components, the Avaya Desktop Video Device, and SIP enabled endpoints (96x1 series) with the Avaya Flare™ Experience. Future SIP applications can also be available for trial.

- **Delivers Avaya Aura™ Core Components** –
The Avaya Aura™ Collaboration Server
provides a suite of the newest releases of
Avaya Aura™ core components, including
Communication Manager 6.0.1, Session
Manager 6.1, System Manager 6.1,
Presence Services 6.0, Utility Services
6.1 and System Platform 6.0.

- **Full Featured "Adjunct" Communications
Platform** – Simply connect this
separate server to your existing Avaya
communications network using SIP. Trial
users are still part of your overall network
and dial plan, but you're not required to
upgrade your entire network.

- **Virtualized to a Single Server** – Avaya
Aura™ System Platform Technology
enables core components of Avaya Aura™
to be deployed on a single server. In
addition, Avaya Aura™ System Manager
tools simplify daily management of the
server's software suite.

| Key Specifications | |
|---|---|
| **Supported SIP Endpoints** | Avaya Video Conference Solution components, Avaya Desktop Video Device (powered by the Avaya Flare™ Experience), and SIP enabled phones (96x1 series) |
| **Virtualization** | Avaya Aura™ System Platform 6.0 |
| **Utility Services** | Communication Manager Utility Services 6.1 |
| **Voice & Video Platform** | Communication Manager 6.0.1 |
| **Session Management** | Avaya Aura™ Session Manager 6.1 |
| **Management** | Avaya Aura™ System Manager  6.1 |
| **Presence** | Avaya Aura™ Presence Services 6.0 |
| **Max. SIP Endpoints** | 50 |
| **Remote Access and Alarming** | SAL (preferred) and VPN |
| **Server Hardware** | Avaya Aura™ Collaboration Server leverages Avaya Aura™ System Platform virtualization and Avaya sourced servers |
